Amendments To The Claims

Please cancel Claims 20-22 and 24-27 without prejudice. The following list of the claims replaces all prior versions and lists of the claims in this application.

Claims 1-27 (Canceled).

28. (Previously presented) At least one high-k device, comprising:
a structure having a strained substrate formed thereover, the strained substrate comprising an uppermost strained-Si epi layer, a middle relaxed $\text{Si}_{1-x}\text{Ge}_x$ layer and a lowermost graded $\text{Si}_{1-y}\text{Ge}_y$ layer;
at least one dielectric gate oxide portion over the strained substrate, the at least one dielectric gate oxide portion having a dielectric constant of greater than about 4.0; and
a device over each of the at least one dielectric gate oxide portion to complete the at least one high-k device.

29. (Previously presented) The device of claim 28, the uppermost strained-Si epi layer having a thickness of from about 100 to 500Å; the middle relaxed $\text{Si}_{1-x}\text{Ge}_x$ layer having a thickness of from about 1000 to 50,000Å; and the lowermost graded $\text{Si}_{1-y}\text{Ge}_y$ layer having a thickness of from about 200 to 50,000Å.

30. (Previously presented) The device of claim 28, where x is greater than 0 and less than about 0.50 and where y is 0 or about 0 proximate the structure and increases to about x proximate the middle relaxed $\text{Si}_{1-x}\text{Ge}_x$ layer, wherein $x \geq y$.

31. (Previously presented) At least one high-k device, comprising:
a structure having a strained substrate formed thereover, the strained substrate comprising an uppermost strained-Si epi layer, a middle $\text{Si}_{1-x}\text{Ge}_x$ layer and a lower silicon oxide layer;

at least one dielectric gate oxide portion over the strained substrate, the at least one dielectric gate oxide portion having a dielectric constant of greater than about 4.0; and

a device over each of the at least one dielectric gate oxide portion to complete the at least one high-k device.

32. (Previously presented) The device of claim 31, wherein the uppermost strained-Si epi layer has a thickness of from about 100 to 500Å, the middle $\text{Si}_{1-x}\text{Ge}_x$ layer has a thickness of from about 700 to 1200Å and the lower silicon oxide layer has a thickness of from about 800 to 2000Å.

33. (Previously presented) At least one high-k device, comprising:
a structure having a strained substrate formed thereover, the strained substrate comprising an uppermost strained-Si epi layer over an upper relaxed $\text{Si}_{1-x}\text{Ge}_x$ layer over a graded $\text{Si}_{1-y}\text{Ge}_y$ layer over an epi layer over a lowermost relaxed $\text{Si}_{1-z}\text{Ge}_z$ layer, wherein $x \geq y \geq z$;

at least one dielectric gate oxide portion over the strained substrate, the at least one dielectric gate oxide portion having a dielectric constant of greater than about 4.0; and

a device over each of the at least one dielectric gate oxide portion to complete the at least one high-k device.

34. (Previously presented) The device of claim 33, the uppermost strained-Si epi layer having a thickness of from about 100 to 500Å; the upper relaxed $\text{Si}_{1-x}\text{Ge}_x$ layer having a thickness of from about 1000 to 50,000Å; the graded $\text{Si}_{1-y}\text{Ge}_y$ layer having a thickness of from about 2000 to 50,000Å; the epi layer having a thickness of from about

20 to 500Å; and the lowermost relaxed $\text{Si}_{1-x}\text{Ge}_x$ layer having a thickness of from about 200 to 50,000 Å.

35. (Previously presented) The device of claim 33, the uppermost strained-Si epi layer having a thickness of from about 150 to 300Å; the upper relaxed $\text{Si}_{1-x}\text{Ge}_x$ layer having a thickness of from about 2000 to 40,000Å; the graded $\text{Si}_{1-y}\text{Ge}_y$ layer having a thickness of from about 500 to 25,000Å; the epi layer having a thickness of from about 50 to 200Å; and the lowermost relaxed $\text{Si}_{1-x}\text{Ge}_x$ layer having a thickness of from about 500 to 25,000Å.

36. (Previously presented) The device of claim 33, where x is no less than y and less than about 0.50, where y is no less than z proximate the epi layer and increases to about x proximate the upper relaxed $\text{Si}_{1-x}\text{Ge}_x$ layer, and where z is greater than 0 and less than about 0.50.

37. (Previously presented) The device of claim 33, wherein the at least one dielectric gate oxide portion being comprised of HfO_2 or HfSiO_4 .

38. (Currently amended) The device of claim 41, wherein the relaxed $\text{Si}_{1-y}\text{Ge}_y$ layer has a thickness of from about 200 to 30,000Å, the constant $\text{Si}_{1-y}\text{Ge}_y$ layer has a thickness of from about 200 to 20,000Å, the silicon epi layer has a thickness of from about 20 to 500Å, the constant $\text{Si}_{1-z}\text{Ge}_z$ layer has a thickness of from about 200 to 20,000Å, and the uppermost strained-Si epi layer ~~has-g~~ has a thickness of from about 20 to 500Å.

39. (Previously presented) The device of claim 41, wherein the relaxed $\text{Si}_{1-y}\text{Ge}_y$ layer has a thickness of from about 300 to 5000Å, the constant $\text{Si}_{1-y}\text{Ge}_y$ layer has a

thickness of from about 300 to 5000Å, the silicon epi layer has a thickness of from about 50 to 300Å, the constant $\text{Si}_{1-x}\text{Ge}_x$ layer has a thickness of from about 300 to 5000Å, and the uppermost strained-Si epi layer has a thickness of from about 50 to 300Å.

40. (Previously presented) The device of claim 41, wherein the at least one dielectric gate oxide portion is comprised of HfO_2 or HfSiO_4 .

41. (Previously presented) At least one high-k device, comprising:
a structure having a strained substrate formed thereover, the strained substrate comprising an uppermost strained-Si epi layer, a relaxed $\text{Si}_{1-y}\text{Ge}_y$ layer under the uppermost strained-Si epi layer, a constant $\text{Si}_{1-y}\text{Ge}_y$ layer under the relaxed $\text{Si}_{1-y}\text{Ge}_y$ layer, a silicon epi layer under the constant $\text{Si}_{1-y}\text{Ge}_y$ layer, and a constant $\text{Si}_{1-x}\text{Ge}_x$ layer under the silicon epi layer, wherein the uppermost relaxed-Si epi layer is comprised of $\text{Si}_{1-x}\text{Ge}_x$ wherein x is constant or graded;

at least one dielectric gate oxide portion over the strained substrate, the at least one dielectric gate oxide portion having a dielectric constant of greater than about 4.0; and

a device over each of the at least one dielectric gate oxide portion to complete the at least one high-k device.
